**Allegati:** Elsa2014\_GiangiordanoP.pdf

Spett.le Ministero dell'Ambiente,  
vi invio in allegato le osservazioni di contrarietà del Sig. Paul Giangiordano al progetto Elsa BR268RG proposto dalla Petroceltic di Dublino.  
Ringraziandovi per l'attenzione vi saluto cordialmente.

Ing. Iolanda Di Simone

Ministero dell'Ambiente e della Tutela del Territorio e del Mare – Direzione Generale Valutazioni Ambientali

Direzione Salvaguardia Ambientale del Ministero dell'Ambiente e della Tutela del Mare, Divisione IV  
Attenzione: Concessione BR 268 RG Petroceltic  
Via Cristoforo Colombo 44 - 00147 Roma

Dear representatives of the Italian government:

My name is Paul Giangiordano and I am an IT specialist with emphasis in forensic science. I know Abruzzo very well and have a special connection with this region because since I was a child, every year I spend my holidays in Bomba, Chieti.

I'm writing from Switzerland, so I am surrounded by nature, and take advantage of it as much as I can, but every year when I visit Bomba and other wonderful places of Abruzzo, I ever envy Abruzzo people, since they are lucky enough to live in a Region not only rich in nature, but also where in the same day it's possibile to enjoy mountains and sea, vast open lands and excellent natural products, adorable towns and culture.

I can't imagine Abruzzo turning into a mining Region, with oil derricks and offshore platforms in the midst of her wonderful nature and sea, by the Trabocchi and her teeming marine life.

The oil drilling program that central authorities want to embark Abruzzo on is in total contrast with the Abruzzo I know and love, made of tradition, tourism, agriculture, fishing, human health and natural beauty.

So I'm writing to recommend that authorization be denied to the drilling permit BR 268 RG off the coast of Abruzzo, as filed to your offices by Dublin based Petroceltic. The "Elsa 2" permit is located only 7 kilometers from shore, between Ortona and Francavilla a Mare, flanked by two natural regional reserves – Punta dell'Acquabella and Ripari di Giobbe – and in close proximity to the protected areas of Punta Aderci, Grotta delle Farfalle, Lecceta di Torino di Sangro. Elsa 2 is the first of at least ten new leases in the central Adriatic that Petroceltic owns. If approved, this exploratory well could turn into a permanent drilling operation and be followed by a slew of other leases, similarly close to shore. In many ways we are worried that this project would morph into a novel Ombrina Mare, requiring an FPSO desulfurizing unit and a series of pipelines for extracting and treating heavy sour oil.

Offshore drilling has negative effects on marine life, coastal communities and on the health of residents. Drilling muds, brine wastes and produced waters are daily disposed of at sea while deck runoff water and pipeline leaks are common problems. As a result, either voluntarily or by accident, offshore rigs dump into the water tons of drilling fluids, metal cuttings and toxic metals that contain lead, chromium, mercury and benzene, which is carcinogenic. At times, catastrophic spills and blowouts may occur extolling heavy damages to the environment, to people, to local economic activities such as fishing and tourism. The case of Elsa is particularly disturbing due not only due to its proximity to shore and the effects of oil on the ecosystem, but also because it sets a perilous path for the very essence of Abruzzo, whose economy is based on tourism, fishing and agriculture. The entire coastal area where Petroceltic intends to drill, is soon to become a National Park, and is known for its rough beauty and pristine waters. Several beaches in the area employ many people in recreational activities and local small businesses depend on a healthy coast as

the foundation for their livelihood. People visit Abruzzo to experience nature and to engage in recreational fishing and surfing, not to see oil platforms. Offshore exploration is misguided and presents significant risks to the future of Abruzzo's economy.

From a larger point of view, our climate is quickly changing in fast, unpredictable ways disrupting entire eco-systems. The primary cause of these changes is the use of fossil fuels: we cannot afford to keep the status quo. Instead of drilling Elsa 2, Italy should be one of the world's leaders in renewable energy due to its geographical position and its abundant solar and wind resources. Abruzzo, blessed by such natural beauty, should stay green, fossil-fuel free and healthy for present and future generations.

Finally, we urge Italian officials to promote a dialogue with other countries that share borders with the Adriatic, and that together Italy, Croatia, Slovenia and Albania, may find a constructive resolution to ban offshore drilling within the entire Adriatic Sea, to save its shores, its marine life and its biodiversity for future generations.

Dr. Paul Giangiordano  
Basel, Switzerland
