## 3. ECOLOGICAL INFORMATION

### 3.1 Habitat types present on the site and assessment for them

[Back to top](#)

Annex I Habitat types						Site assessment			
Code	PF	NP	Cover [ha]	Cave [number]	Data quality	A B C D	A B C		
						Representativity	Relative Surface	Conservation	Global
1120			42.67		M	A	C	A	A
1210			0.24		P	A	C	A	A
1410			37.65		G	B	C	B	B
1510			40.16		G	B	C	B	B
2110			0.33		G	C	C	C	C
2120			0.33		G	C	C	C	C
2210			2.51			B	C	C	A
2230			2.51		M	D			

92D0			0.32		M	B	C	C	C
------	--	--	------	--	---	---	---	---	---

- PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- Cover:** decimal values can be entered
- Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

### 3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

Species				Population in the site							Site assessment			
G	Code	Scientific Name	S	NP	T	Size		Unit	Cat.	D.qual.	A B C D	A B C		
						Min	Max				Pop.	Con.	Iso.	Glo.
B	A111	<a href="#">Alectoris barbara</a>			p				P	DD	D			
B	A255	<a href="#">Anthus campestris</a>			r				P	DD	D			
B	A255	<a href="#">Anthus campestris</a>			c				P	DD	D			
B	A243	<a href="#">Calandrella brachydactyla</a>			r				P	DD	D			
B	A243	<a href="#">Calandrella brachydactyla</a>			c				P	DD	D			
B	A224	<a href="#">Caprimulgus europaeus</a>			c				P	DD	D			
B	A138	<a href="#">Charadrius alexandrinus</a>			w				P	DD	D			
B	A138	<a href="#">Charadrius alexandrinus</a>			c				P	DD	D			
B	A081	<a href="#">Circus aeruginosus</a>			w				P	DD	D			
B	A081	<a href="#">Circus aeruginosus</a>			c				P	DD	D			
B	A084	<a href="#">Circus pygargus</a>			c				P	DD	D			
B	A084	<a href="#">Circus pygargus</a>			w				P	DD	D			
B	A027	<a href="#">Egretta alba</a>			w				P	DD	D			
B	A027	<a href="#">Egretta alba</a>			c				P	DD	D			
B	A135	<a href="#">Glareola pratincola</a>			r				P	DD	B	C	B	C
B	A135	<a href="#">Glareola pratincola</a>			c				P	DD	B	C	B	C
B	A242	<a href="#">Melanocorypha calandra</a>			p				P	DD	D			

- **Group:** A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

### 3.3 Other important species of flora and fauna (optional)

- **Group:** A = Amphibians, B = Birds, F = Fish, Fu = Fungi, I = Invertebrates, L = Lichens, M = Mammals, P = Plants, R = Reptiles
- **CODE:** for Birds, Annex IV and V species the code as provided in the reference portal should be used in addition to the scientific name
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Unit:** i = individuals, p = pairs or other units according to the standard list of population units and codes in accordance with Article 12 and 17 reporting, (see [reference portal](#))
- **Cat.:** Abundance categories: C = common, R = rare, V = very rare, P = present
- **Motivation categories:** **IV, V:** Annex Species (Habitats Directive), **A:** National Red List data; **B:** Endemics; **C:** International Conventions; **D:** other reasons

#### 4. SITE DESCRIPTION

## 4.1 General site character

Habitat class	% Cover
N04	65.0
N08	7.0
N23	3.0
N01	25.0
<b>Total Habitat Cover</b>	<b>100</b>

### Other Site Characteristics

Il "Sassu-Cirras" è una vasta area situata lungo la fascia costiera del Comune di Santa Giusta, tra la foce dello Stagno di S'Ena Arrubia a sud, ed il porto e la zona industriale di Oristano. Il SIC comprende tutta la spiaggia di "Abbarossa" con il retrospiaggia ed un tratto del mare antistante la spiaggia stessa. E' direttamente connessa a sud con il SIC dello "Stagno di S'Ena Arrubia" mediante lo "Stagno di Zrugu Trottu", quest'ultimo compreso nel territorio comunale di Santa Giusta. Si tratta di un'area in origine interessata da un sistema dunale con piccole zone umide retrodunali. Successivamente ha subito notevoli trasformazioni in conseguenza delle attività estrattive (cave di sabbia), delle attività agricole (bonifica del Cirras) e delle attività balneari e turistiche, anche se di dimensione locale. Il tratto di costa sabbiosa ha una lunghezza di alcuni Km e una larghezza massima di 1 Km. L'altezza delle dune non supera gli 11 m. e la spiaggia sommersa contribuisce ad arricchire di sabbia e detriti organici la costa emersa.

## 4.2 Quality and importance

Sito nelle cui dune costiere si rinviene una cenosi del Crucianellion maritimae Rivas-Goday et Rivas-Martinez 1963 caratterizzate dalla presenza di *Ephedra distachya* subsp. *distachya* al limite meridionale della sua distribuzione nella costa occidentale. Nell'area sono presenti inoltre diverse altre specie meritevoli di una salvaguardia: *Limonium tenuifolium* ed *Ephedra distachya*.

## 4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site

Negative Impacts			
Rank	Threats and pressures [code]	Pollution (optional) [code]	inside/outside [i o b]
M	K01.01		
H	E02		i
L	E03.04		i

N04	10.0
<b>Total Habitat Cover</b>	<b>100</b>

### Other Site Characteristics

La laguna di S'Ena Arrubia è situata nel Golfo di Oristano lungo la costa centro-occidentale della Sardegna. Funge da bacino di raccolta per le acque della bonifica di Arborea. La comunicazione con le acque del Golfo è regolata da un canale artificiale. L'area è caratterizzata da depositi del Quaternario del Pleistocene e dell'Olocene. Predominano suoli Typic, Aquic e Ultic, Palexeralf, mentre in subordine sono presenti Xerofluvents. Le precipitazioni sono tipicamente stagionali concentrate nel periodo tra ottobre e marzo. Il mese più piovoso è dicembre con una media di 99,6 mm quello più secco è luglio con 3,6 mm. La temperatura media è di 16,9°C, la media delle massime del mese più caldo è di 32,3°C la media delle minime del mese più freddo è di 5,2°C. La massima assoluta è 39,8°C, la minima assoluta è 10,4°C. L'area presenta un clima semiarido con estati tiepide e non molto piovose e inverni piovosi e non molto freddi. I venti predominanti sono il maestrale e lo scirocco. La Laguna di S'Ena Arrubia è stata definita come "l'unico relitto dello Stagno del Sassu", che venne bonificato tra il 1934 ed il 1937, con altri 200 piccoli stagni e paludi per una superficie complessiva di 3.270 ettari. Lo stagno di S'Ena Arrubia, che costituiva la parte terminale del Sassu, venne trasformato in un bacino indipendente alimentato non più da immissari naturali (convogliati altrove come il Rio Logoro, ma da tre canali artificiali. La laguna è delimitata ad ovest dal cordone litorale, a nord dai depositi alluvionali del Tirso, a sud dai terreni sabbiosi che costituiscono la bonifica di Arborea, mentre a est l'idrovora del Sassu ne interrompe la continuità con l'area bonificata dell'originario Stagno di Sassu. La sua profondità varia da 40 cm a 1.40 metri circa ed i fondali sono prevalentemente fangosi. Il bacino di S'Ena Arrubia si è formato su un ampio avvallamento in terreni alluvionali ed eolici, in una pianura invasa dalle acque dolci dell'entroterra. Tale avvallamento è stato sbarrato da dune litoranee, infatti si hanno due formazioni contigue: procedendo dal mare verso terra dapprima un cordone dunale attuale, poi sabbie appartenenti alle vecchie dune, testimoni dell'antico limite della spiaggia pleistocenica. Le sabbie sono costituite da materiali di apporto marino (residui conchiglieri, sabbie di battiglia) ed in gran parte da materiale di erosione.

### 4.2 Quality and importance

Le censi sono in successione catenale con le variazioni del livello dell'acqua e presentano associazioni ben strutturate e floristicamente differenziate. Sono presenti associazioni delle classi Patamogetonea pectinati, Caratophylletea, Phragmitetea, Salicornietea fruticosae, Juncetea, Thero-Suaedethea, Saginetea maritimae, Nerio-Tamaricetea, Lemnetea minoris, Phragmitetea, Magnocaricetea, Arthemisietea vulgaris, Stellarietea mediae e Ruppietea. Sito di importanza internazionale per la fauna legata alle aree umide (inserito nella Convenzione di Ramsar).

### 4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site

Negative Impacts			
Rank	Threats and pressures [code]	Pollution (optional) [code]	inside/outside [i o b]

Positive Impacts			
Rank	Activities, management [code]	Pollution (optional) [code]	inside/outside [i o b]
	X		

Rank: H = high, M = medium, L = low

Pollution: N = Nitrogen input, P = Phosphor/Phosphate input, A = Acid input/acidification,

T = toxic inorganic chemicals, O = toxic organic chemicals, X = Mixed pollutions

i = inside, o = outside, b = both

## 4. SITE DESCRIPTION

[Back to top](#)

### 4.1 General site character

Habitat class	% Cover
N03	100.0
Total Habitat Cover	100

### Other Site Characteristics

Ambiente stagnale caratterizzato da acque a bassa salinità con rive a modestissimo pendio fittamente inerbate. Vegetazione dominante riparia costituita prevalentemente da fragmiteti che si espandono in larghezza per varie centinaia di metri. Le precipitazioni sono tipicamente stagionali concentrate nel periodo tra ottobre e marzo. Il mese più piovoso è dicembre con una media di 99,6mm quello più secco è luglio con 3,6mm. La temperatura media è di 16,9°C, la media delle massime del mese più caldo è di 32,3 °C la media delle minime del mese più freddo è di 5,2°C. La massima assoluta è 39,8°C, la minima assoluta è 10,4°C. L'area presenta un clima semiarido con estati tiepide e non molto piovose e inverni piovosi e non molto freddi. I venti predominanti sono il maestrale e lo scirocco.

### 4.2 Quality and importance

Si riscontrano ambienti tipici di zone umide caratterizzati da diversi tipi di vegetazione a elofite di acque dolci debolmente salmastre (*Phragmitetea*), geofite di acqua salmastra (*Juncetea maritim*i) e alofite (*Thero-salicornietea*). Presenza di una entità endemica (*Vinca sardoa*) che trova ospitalità ai margini dello stagno in aree semiaride. Presenza di specie ornitiche di valore zoogeografico internazionale. Presenza di numerosi endemismi tirrenici e mediterranei. Sito di importanza internazionale per la fauna legata alle aree umide (inserito nella Convenzione di Ramsar).

### 4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site

Negative Impacts				Positive Impacts			
Rank	Threats and pressures [code]	Pollution (optional) [code]	inside/outside [i o b]	Rank	Activities, management [code]	Pollution (optional) [code]	inside/outside [i o b]
			X				

Rank: H = high, M = medium, L = low

Pollution: N = Nitrogen input, P = Phosphor/Phosphate input, A = Acid input/acidification,

T = toxic inorganic chemicals, O = toxic organic chemicals, X = Mixed pollutions

i = inside, o = outside, b = both

### 4.4 Ownership (optional)

Type	[%]
Public	National/Federal
	State/Province
	Local/Municipal
	Any Public
Joint or Co-Ownership	0

Private	0
Unknown	100

## 4. SITE DESCRIPTION

[Back to top](#)

### 4.1 General site character

Habitat class	% Cover
N02	90.0
N03	10.0
Total Habitat Cover	100

### Other Site Characteristics

Lo Stagno di Santa Giusta ha una forma pressoché rotonda; è separato dal mare da un largo cordone litorale ed è collegato ad esso da un canale artificiale. Non ha immissari diretti e riceve acque di drenaggio da canali di bonifica. E' il terzo stagno sardo per estensione. La superficie dello specchio d'acqua è di 790 ettari e la profondità varia da poche decine di centimetri a circa 1.20 metri. Il fondo è raramente sabbioso, per lo più costituito da limo e da un misto limo-sabbia. Allo stagno sono collegati, attraverso due canali di limitata larghezza, altri due bacini: lo stagno di Pauli Majori (anch'esso Sito d'Interesse Comunitario) e lo stagno di "Pauli Figu", attraverso i quali lo stagno di Santa Giusta riceve apporti di acqua dolce. Gli immissari attuali dello stagno sono il canale di San Giovanni e il Rio Merd'e Cani.

## 4.2 Quality and importance

Sito importante per lo svernamento e la riproduzione di molte specie avifaunistiche di interesse Comunitario. Le cenosi sono in successione catenale con le variazioni del livello d'acqua e presentano associazioni ben strutturate e floristicamente differenziate. Sono presenti praterie saline sommerse nello specchio d'acqua e steppe salate lungo le sponde. Nel bacino di Pauli Sa Gora si sviluppa inoltre una vegetazione a Cressa cretica.

## 4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site

Negative Impacts			
Rank	Threats and pressures [code]	Pollution (optional) [code]	inside/outside [i o b]
M	E03.02		I
L	A04		O
L	A01		O
L	J02.03		I
M	J02.06		I
L	E03.01		I
M	J02.07		i
M	F02.01.02		I

Positive Impacts			
Rank	Activities, management [code]	Pollution (optional) [code]	inside/outside [i o b]
M	J02.06		i
M	F02.01.02		I

Rank: H = high, M = medium, L = low

Pollution: N = Nitrogen input, P = Phosphor/Phosphate input, A = Acid input/acidification,

T = toxic inorganic chemicals, O = toxic organic chemicals, X = Mixed pollutions

i = inside, o = outside, b = both

## 4.4 Ownership (optional)

Type	[%]
Public	National/Federal
	State/Province
	Local/Municipal
	Any Public
Joint or Co-Ownership	0
Private	0

Total Habitat Cover	100

### Other Site Characteristics

Funge da bacino di raccolta per le acque della bonifica di Arborea. La comunicazione con le acque del Golfo è regolata da un canale artificiale. La Laguna di S'Ena Arrubia è situata nel Golfo di Oristano lungo la costa centro-occidentale della Sardegna. Funge da bacino di raccolta per le acque della bonifica di Arborea. La comunicazione con le acque del Golfo è regolata da un canale artificiale. L'area è caratterizzata da depositi del Quaternario del Pleistocene e dell'Olocene.

### 4.2 Quality and importance

Le cennosi sono in successione catenale con le variazioni del livello dell'acqua e presentano associazioni ben strutturate e floristicamente differenziate. Sono presenti associazioni delle classi Patamogetonea pectinati, Caratophylletea, Phragmitetea, Salicornietea fruticosae, Juncetea, Thero-Suaedethea, Saginetea maritimae, Nerio-Tamaricetea, Lemnetea minoris, Phragmitetea, Magnocaricetea, Arthemisietea vulgaris, Stellarietea mediae e Ruppietea. Sito di importanza internazionale per la fauna legata alle aree umide (inserito nella Convenzione di Ramsar).

### 4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site

Negative Impacts				Positive Impacts			
Rank	Threats and pressures [code]	Pollution (optional) [code]	inside/outside [i o b]	Rank	Activities, management [code]	Pollution (optional) [code]	inside/outside [i o b]
					X		

Rank: H = high, M = medium, L = low

Pollution: N = Nitrogen input, P = Phosphor/Phosphate input, A = Acid input/acidification,

T = toxic inorganic chemicals, O = toxic organic chemicals, X = Mixed pollutions

i = inside, o = outside, b = both

## 3. ECOLOGICAL INFORMATION

### 3.1 Habitat types present on the site and assessment for them

[Back to top](#)

Annex I Habitat types						Site assessment				
Code	PF	NP	Cover [ha]	Cave [number]	Data quality	A B C D	A B C			
						Representativity	Relative Surface	Conservation	Global	
1150			45.58		P	C	B	B	B	
1310			0.67		P	C	C	C	C	
1410			19.05		P	C	C	C	C	
1420			3.51		P	B	C	C	B	
3170			0.037		P	D				
92D0			2.16		P	D				

- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.

- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

### 3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

Species				Population in the site						Site assessment				
G	Code	Scientific Name	S	NP	T	Size		Unit	Cat.	D.qual.	A B C D	A B C		
						Min	Max				Pop.	Con.	Iso.	Glo.
B	A293	<a href="#">Acrocephalus melanopogon</a>			w				P	DD	D

## 4. SITE DESCRIPTION

[Back to top](#)

### 4.1 General site character

Habitat class	% Cover
N03	100.0
Total Habitat Cover	100

### Other Site Characteristics

Ambiente stagnale caratterizzato da acque a bassa salinità con rive a modestissimo pendio fittamente inerbate. Vegetazione dominante riparia costituita prevalentemente da fragmiteti che si espandono in larghezza per varie centinaia di metri.

### 4.2 Quality and importance

Si riscontrano ambienti tipici di zone umide caratterizzate da diversi tipi di vegetazione a terofite di acque dolci debolmente salmastre (Phragmitetea), geofite di acqua salmastra (Juncetea maritimii) e alofite (Thero-salicornietea). Presenza di entita' endemica (Vinca sardoa) che trova ospitalita' ai margini dello stagno in aree semiaride. Presenza di specie ornitiche di valore zoogeografico internazionale. Presenza di numerosi endemismi della Tirrenide e mediterranei. Sito di importanza internazionale per la fauna legata alle aree umide (inserito nella Convenzione di Ramsar).

### 4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site
