Oggetto: RE: Montenegro's Public Consultations for the Draft Report of the Strategic Environmental Impact Assessment for the Program of Exploration and Production of Offshore Hydrocarbons.

Please stop this drilling. There is enough oil elsewhere. Adriatic sea has unique ecosystem! The coast is beautiful and the fish are the world best quality. Please help and stop this!

Thank you, in the name of our children and grandchildren!

Sincerely,
Metka Snoj

"I strongly urge the Government of Montenegro to end the hazardous offshore drilling project in the Adriatic Sea. Not only would one oil incident similar to the one in the Gulf of Mexico, permanently destroy the entire ecosystem, but the cumulative effect of the expected expansion of multiple wells creates a permanent pollution situation for the region and the health of its citizens for effectively 30 years! The negative effects down-current on fishing, tourism, and real estate are amplified due to the direction of major ocean currents that circulate toward Croatia, Slovenia and Italy within the mostly-enclosed Adriatic. Incredibly, some of the granted drilling areas coincide with undersea deposits of unexploded ordnance dating from the second world war and the recent conflict in former Yugoslavia**, which further makes this project unsound. This project must be stopped and renewable energy alternatives should be pursued for our future."
