### Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito

### 4.2 Quality and importance

Il sito è stato per anni sede di una garzaia nella quale nidificavano anche specie di ardeidi di importanza comunitaria. La presenza di alcune coppie di Egretta garzetta risulta segnalata fino al 2001. Nel 2002 è segnalato il tentativo fallito di nidificazione da parte di alcune coppie di Ardea cinerea. Interessanti, se pur di estensione assai limitata, gli habitat di tipo idroigrofilo in particolare per il loro carattere di relitto sfuggito agli interventi di bonifica.
