Object: Gas Turbine Generator Inquiry ITAT-AKE-41-ms-833-00-3001 rev 0.

Dear Mr. Collins,

With reference to your letter dated February 21st, 2005 please find below our answer to the item 8.

Based on our experience and on the data recorded during the emission tests performed at site and in our factory we would like to inform XOM that the proposed GE10/1 DLN gas turbine meets the emission limits specified by XOM and noted in the Decree of the Italian Ministero Delle Attività Produttive dated 11 November 2004

The limits required are the following:

- NO_x 50 mg/Nm³ dry exhaust gases @ 15% O₂
- CO 40 mg/Nm³ dry exhaust gases @ 15% O₂

We confirm that the above limits can be accomplished on the GT operative range 50-100% of load and that they are only applicable when the units run with fuel gas.

Best Regards

 **GE Oil & Gas**
