## ***Nota tecnica di chiarimento e rettifica alla comunicazione annuale AIA della Centrale Edipower di San Filippo del Mela***

Facciamo riferimento alla Vostra nota prot. 24913 del 21/07/2011 per fornire di seguito i chiarimenti richiesti.

In riferimento alla criticità evidenziata in merito al valore medio mensile di NO<sub>x</sub> del mese di giugno 2010 per il GR1, comunichiamo il puntuale rispetto del limite emissivo giornaliero, pari a 100 mg/Nm<sup>3</sup>. Nella comunicazione inviata, risulta errata l'elaborazione della media mensile, pari a 148,3 mg/Nm<sup>3</sup>, riportata nell'allegato 5 del report annuale 2010; il valore reale è infatti pari a 59,7 mg/Nm<sup>3</sup>.

Chiariamo di seguito le motivazioni che hanno portato all'invio del report annuale contenente dati errati.

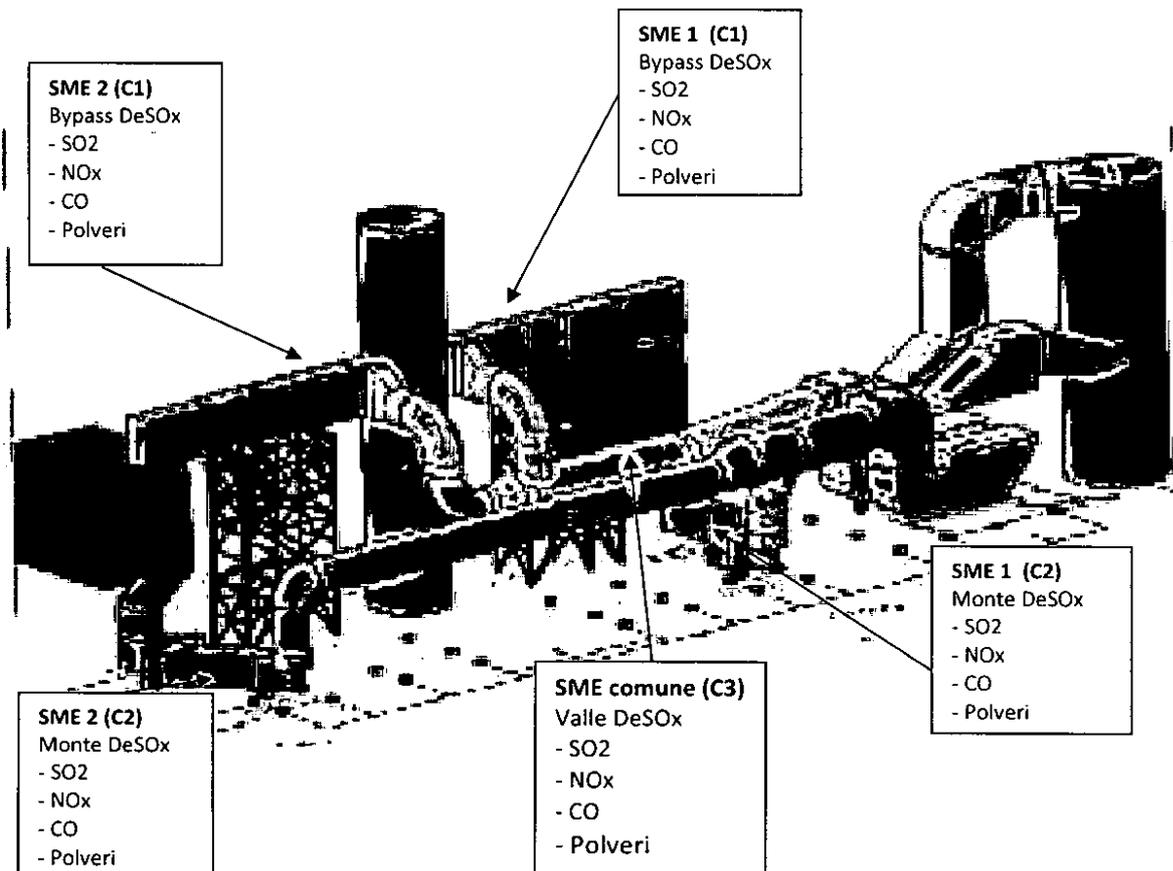

La configurazione del SME che monitorizza le emissioni dei gruppi 1 e 2 confluenti al camino C1 è la seguente:

I gruppi 1 e 2 sono unità di produzione distinte, dotate di autonomia tecnica e funzionale; ciascuna unità è dotata di caldaia, turbina a vapore e alternatore, allacciato a reti elettriche differenti (150 kV per l'unità 1 e 220 kV per l'unità 2). Ai fini del contenimento delle emissioni in atmosfera, ciascun gruppo è dotato di sistemi di combustione a basso NO<sub>x</sub>, sistema di abbattimento catalitico degli NO<sub>x</sub> (SCR) e sistema elettrostatico di abbattimento delle polveri (precipitatori elettrostatici); le due unità condividono un unico sistema di abbattimento degli ossidi di zolfo (Desolforatore a umido calcare/gesso), che esercita anche un ulteriore effetto di abbattimento delle polveri, ed un'unica ciminiera.

Per quanto riguarda i sistemi di monitoraggio in continuo delle emissioni (SME), sono presenti prese campione e strumenti di misura:

- per i fumi convogliati al camino comune (a valle del sistema di abbattimento degli ossidi di zolfo), punto denominato SME Comune C3
- per i fumi in uscita dalle singole unità (a valle dei sistemi di abbattimento degli ossidi di azoto e dei precipitatori elettrostatici ed a monte del sistema di abbattimento degli ossidi di zolfo), punti denominati SME1-C2 (GR1) e SME2-C2 (GR2)
- per i fumi inviati direttamente a ciminiera in fase di avviamento delle unità e dei relativi sistemi di abbattimento delle emissioni, punti denominati SME1-C1 (GR1) e SME2-C1 (GR2)

In figura sono rappresentate le posizioni dei vari punti di misura.

Il report utilizzato per le comunicazioni inerenti il rispetto dei limiti emissivi giornalieri per il gruppo 1 è la **tabella 4.4.4N (C3)**, con possibilità di selezionare il valore di concentrazione (SO<sub>2</sub>, NO<sub>x</sub>, CO, Polveri) misurato ai singoli punti di monitoraggio [ SME comune C3; SME1-C2 ; SME1-C1 ].

Si evidenzia che per la verifica del rispetto dei limiti emissivi, per i gruppi 1 e 2, dai primi mesi del 2011, oltre alla tabella 4.4.4N ( C3) è disponibile anche la tabella 4.4.6, che gestisce in automatico i criteri del rispetto dei limiti, condivisi con Ispra ed Arpa in occasione dell'incontro svoltosi il 09/06/2010 ed autorizzati da Ispra ed Arpa con fax di ISPRA prot. 0042005 del 09/12/2010.

Per un problema al SW (risolto in fase di messa a punto finale), nella elaborazione della tabella riepilogativa 4.4.4N (C3), relativa al periodo di giugno 2010, il sistema ha effettuato i calcoli tenendo erroneamente conto anche dei valori medi orari relativi ad ore di NORMALE FUNZIONAMENTO < 6 nella giornata.

Per tale motivo, relativamente ai giorni 14 e 15 giugno 2010, in occasione dei quali le ore di normale funzionamento erano state solo 4, come si riscontra nel file allegato 1, i valori non avrebbero dovuto essere utilizzati nelle elaborazioni delle medie, come invece è accaduto.

In merito ai giorni 25 e 26 giugno 2010, nell'elaborazione annuale delle tabelle 4.4.4N (C3), sono stati utilizzati valori di medie orarie relative a misure di NO<sub>x</sub>, acquisite dal SME posizionato nel punto di misura SME Comune C3, palesemente errati e generati dal fatto che il sistema era oggetto dei lavori (concordati con le Autorità di controllo) di adeguamento alle prescrizioni; i dati pertanto avrebbero dovuto essere invalidati, sostituendoli con quelli correttamente rilevati dagli strumenti posizionati prima del desolforatore (punto SME1-C2).

Nei giorni citati il rispetto dei limiti per la concentrazione di NO<sub>x</sub>, è stato infatti garantito come anche documentato dalle registrazioni delle misure acquisite dal SME al punto di misura SME1-C2, allegate (allegato 2).

In allegato 3 si riportano le **tabelle 4.4.4N (C3)**, elaborate fuori linea per le giornate di cui sopra, epurate dagli errori descritti. Ribadiamo che, per entrambi le giornate, si riscontrano valori di media giornaliera di NO<sub>x</sub> per il GR1 inferiori ai 100 mg/Nm<sup>3</sup> (giorno 25/6 media giornaliera di 49,9 mg/Nm<sup>3</sup>, giorno 26/6 media giornaliera 32,0 mg/Nm<sup>3</sup>).

Si evidenzia che il GR 2 in tali giorni era fermo ( dal 21 al 30 giugno), di conseguenza i valori di NO<sub>x</sub> presenti ai punti SME1-C2 e SME Comune C3, misurati da strumenti differenti, uno all'ingresso e l'altro all'uscita del desolforatore, non potevano che rilevare il solo apporto del GR1.

Il Gruppo 1, nel mese di Giugno 2010, è stato in marcia nei giorni 14-15-16-17, 25-26 e 30 giugno. Dall'analisi delle misure di NO<sub>x</sub> registrate nei punti di misura SME Comune C3 e SME1-C2, nei giorni di marcia del gruppo sino al 17 giugno, si evince un andamento di misure regolarmente simili tra i due punti di prelievo. Nei giorni 25 e 26, si verificano le anomalie su menzionate.

Alla ripartenza, cioè dal 30 giugno in avanti, le misure rilevate in entrambi i punti (C2 e C3) tornano ad essere correttamente allineate, come si evince nell'allegato 4.

Si mette in rilievo che durante tutto il mese di giugno 2010, l'impianto di abbattimento degli NO<sub>x</sub> (Denitrificatore) è stato sempre in funzione regolarmente, e che nello stesso periodo, come per tutti gli altri periodi in cui il Denox è in esercizio, ha trattato il 100% della portata fumi.

Nel periodo dal 18 giugno al 26 giugno 2010, il sistema emissioni è stato oggetto di attività di modifica particolarmente critiche, che hanno comportato interventi su tutti i concentratori dell'intero sistema di monitoraggio, tanto da avere ritenuto necessario di farne esplicita comunicazione (allegato 5), nonostante il cronoprogramma di adeguamento hardware e software, condiviso come previsto con Ispra ed Arpa, fosse già stato precedentemente comunicato.

Si allegano i rapporti degli interventi della ditta ABB (allegato 6), costruttrice dello SME di CTE, relativi al suddetto periodo, dal quale si evince che il giorno 22 giugno sono stati eseguiti interventi di modifica su Hardware e Software del concentratore PCU13, che gestisce, per l'appunto, tutte le misure del punto di prelievo SME comune C3 .

Alla ripartenza, cioè il giorno 25, si riscontra che l'andamento delle misure NO<sub>x</sub> acquisite è circa 6 -7 volte maggiore di quelle registrate al punto SME 1-C2. La stessa anomalia si registrava anche nel giorno successivo e sinché il SW non è stato resettato ai parametri corretti.

Riepilogando, il dato errato comunicato è stato generato da anomalie di post elaborazione dei dati archiviati dal Sistema Monitoraggio Emissioni, nella fase di elaborazione del report annuale richiesto dal PMC, nelle seguenti due situazioni specifiche :

- Caso A) giorni 14 e 15 giugno, utilizzo errato di valori relativi a giornate in cui le ore di Normale Funzionamento sono inferiori a 6;
- Caso B) giorni 25 e 26 giugno, utilizzo di valori errati per anomalia al software di gestione, durante le attività di manutenzione per adeguamento del SME alla nuova normativa (AIA).

In allegato 7 al presente documento si riporta quindi la tabella contenente i dati corretti che sostituisce l'allegato 5 al report annuale inviato in precedenza.

Per quanto riguarda il trattamento del 100% della portata fumi, si ribadisce quanto già contenuto nel verbale di Ispezione programmata dei giorni 14-15 e 16 dicembre 2010, punto 7 e cioè che, come risulta dal manuale d'uso e manutenzione del costruttore, il sistema non consente la parzializzazione della portata fumi inviata al catalizzatore.

Sono installate linee di bypass che intercettano i fumi prima della messa in esercizio dei gruppi DeNOx, ovvero prima del raggiungimento delle caratteristiche di funzionamento del letto catalitico ( 310-320 °C); successivamente il 100% dei fumi viene trattato dai sistemi catalitici.

In allegato 8 sono riportati i parametri di riscontro relativi alla registrazione dello stato delle serrande di ingresso/uscita, realizzati a fronte della richiesta di Ispra ed Arpa contenuta nel suddetto verbale.

Si trasmette, in allegato 9, la documentazione richiesta in materia di valutazione dell'efficienza del desolfatore dei gruppi 1 e 2 sull'abbattimento degli inquinanti su cui tale impianto ha effetto (SO<sub>2</sub> e polveri).

I valori di abbattimento per l'SO<sub>2</sub>, alle attuali condizioni di esercizio (carichi, combustibili, ecc...), sono mediamente superiori al 95% e, per almeno la metà dei valori, pari o superiori al 97%;

I valori di abbattimento delle polveri sono estremamente più variabili (tra il 29 ed il 93%), comunque mediamente superiori al 70 % e molto influenzati dal rapporto tra le concentrazioni medie in uscita dal gruppo 1 e dal gruppo 2; tale influenza ha portato a valori apparentemente incongruenti della percentuale di abbattimento del gruppo 2 nel mese di giugno e del gruppo 1 nel mese di marzo. In questi casi, infatti, l'elevata concentrazione di polveri in uscita dal gruppo 1, nel mese di giugno, e dal gruppo 2, nel mese di marzo, ha mascherato l'effetto di abbattimento operato dal DeSOx sulle polveri emesse rispettivamente dai gruppi 2 e 1.

In merito alle carenze documentali segnalate nei punti da 1 a 5, inviamo la seguente documentazione:

- 1) Vedi allegato 7, integrazione misure CO (non precedentemente fornite in quanto non richieste nell'elenco della documentazione da presentare, indicata nel PMC nella parte relativa alla comunicazione annuale).
- 2) Le nuove misure di NH<sub>3</sub> sono state oggetto di campagna di misure e di proposta avanzata da Edipower nel corso delle riunioni di attuazione dell'AIA. Nel mese di Novembre 2010 sono stati presentati ( vedi mail del 15/11/2010 rapporto ISMES B0030804 ) i risultati della campagna di misure a supporto delle proposte di effettuare le medesime con frequenza semestrale. Inoltre analoga richiesta è stata avanzata in sede di istanza di modifica dell'AIA avviata dal Gestore in data 7 ottobre 2010. In allegato 10 si riportano i valori di NH<sub>3</sub> rilevati nella seconda campagna di misura di microinquinanti effettuata nel corso del 2010 : vedi rispettivi rapporti microinquinanti **paragrafo 4.6.**[B1028048 Gr 1 e 2, B1028053 Gr 5 e B1028054 Gr 6 ]. Tali misure sono state regolarmente effettuate mensilmente a partire dal mese di gennaio 2011, a fronte della comunicazione di Ispra ed Arpa a mezzo fax prot. 0042005 del 09/12/2010, che dava conferma di effettuare le misure con cadenza mensile.
- 3) Con gli allegati 11, 12, 13 e 14 alla presente si forniscono i dati richiesti rispettivamente ai punti 2,3,4 e 5 della Vs comunicazione.

Relativamente alla Vs richiesta, punto 6, si precisa che il GR5 non ha effettuato manutenzioni programmate nel corso dell'anno 2010. In allegato 15 alla presente, si trasmette nuovamente, l'allegato 4 alla relazione annuale, opportunamente integrato con le informazioni relative al gruppo 6.

Infine per quanto attiene alla richiesta del punto 7, si evidenzia che il GR2 nel mese di dicembre 2010 è stato sempre fermo, non sono di conseguenza presenti le registrazioni dei dati riguardanti gli avvii/spengimenti.

Si evidenzia che la limitazione della registrazione di tali dati al mese di dicembre, per tutti i gruppi, è dovuta al fatto che la funzione di registrazione degli avvii/spengimenti è stata implementata nel SME, a fronte delle prescrizioni AIA.

Tale nuova funzione, oggetto di chiarimenti e di condivisione nel corso degli incontri con Ispra ed Arpa avvenuti nel 2010, è stata realizzata nell'ambito dei lavori di adeguamento del SME, come da cronoprogramma condiviso nell'ambito degli incontri citati, che prevedeva la fine dei lavori al 30 di novembre 2010.

**Elenco allegati:**

- 1) Tabelle 4.4.4. Gr 1 relative ai giorni 14 e 15 giugno 2010 (n° 4 pagine);
- 2) Tabelle 4.4.4. Gr 1 relative ai giorni 25 e 26 giugno 2010 – punto C2 (n° 4 pagine) e Tabelle 4.4.4. Gr 1 relative ai giorni 25 e 26 giugno 2010 – punto C3 (n° 4 pagine);
- 3) Tabelle 4.4.4. Gr 1 relative ai giorni 25 e 26 giugno 2010 – punto C3 (n° 4 pagine);
- 4) Tabelle 4.4.4. Gr 1 relative al mese di giugno 2010 – punto C2 e C3 (n° 62 pagine);
- 5) Comunicazione Ispra del 16/16/2010, prot. 5209 (n° 2 pagine);
- 6) Rapporto intervento ABB ( n° 1 pagine);
- 7) Concentrazione media mensile e quadrimestrale SO<sub>2</sub>, NO<sub>x</sub> polveri e CO ( n° 3 pagine);
- 8) Registrazione serrande uscita DeNO<sub>x</sub> Gr 1 e 2 ( n° 7 pagine);
- 9) Efficienza DeSO<sub>x</sub> SF1-SF2 ( n° 2 pagine);
- 10) Valori di NH<sub>3</sub> rilevati - B1028048 Gr 1 e 2, B1028053 Gr 5 e B1028054 Gr 6 (n° 3 pagine);
- 11) Volumi acque raffreddamento e portata scarichi I3 ed I5 (n°3 pagine);
- 12) Rendimento elettrico medio ed effettivo lordo e netto (n° 2 pagine);
- 13) Consumi di risorse e consumi specifici per MWh ( n° 1 pagina);
- 14) Stima del calore introdotto in acqua su base mensile (n° 3 pagine);
- 15) Elenco fermate 2010 (n° 1 pagina).

---

Oggetto: Autorizzazione Integrata Ambientale Centrale Edipower San Filippo del Mela :  
Interventi di modifica del SME per attuazione del Piano di Monitoraggio e Controllo.

In riferimento alle attività di adeguamento del SME, prescritte nel Piano di Monitoraggio e Controllo (PMC) allegato all'Autorizzazione Integrata Ambientale, rilasciata per l'esercizio della Centrale Edipower di San Filippo del Mela, ed attualmente in corso di esecuzione, in accordo al cronoprogramma condiviso, si comunica che nel periodo dal 18/06/10 al 26/6/10 saranno effettuati lavori di installazione di nuovi componenti hardware e software nei concentratori. Tali attività potranno comportare il necessario spegnimento dei singoli concentratori di acquisizione delle misure secondo un programma di 1-2 concentratori al giorno.

www.edipower.it

Allegato 5 - pag 2 di 2

Viene evidenziato che un concentratore gestisce gli analizzatori di 2 unità di produzione. La durata dei lavori, per cui si prevede lo spegnimento, per ciascun concentratore è prevista in circa 3 - 4 ore. Gli interventi verranno effettuati privilegiando le condizioni di minor perdita di dati possibile.

**Nota:**

*In relazione alle modalità di funzionamento ed alle caratteristiche dei combustibili bruciati, i valori di abbattimento di SO2 nel periodo analizzato sono risultati mediamente superiori al 95% e, per il 50% dei casi, superiori al 97%.*

*I valori di abbattimento delle polveri pur variando nell'intervallo compreso tra il 29 % ed il 93 % risultano mediamente superiori al 70 % e risultano notevolmente influenzati dal rapporto tra le concentrazioni medie in uscita dal gruppo 1 e dal gruppo 2: questo ha portato a valori apparentemente incongruenti della percentuale di abbattimento del gruppo 1 nel mese di marzo e del gruppo 2 nel mese di giugno. In questi casi, infatti, la concentrazione di polveri in uscita dal gruppo 1, nel mese di giugno, e dal gruppo 2, nel mese di marzo, ha presumibilmente mascherato l'effetto di abbattimento operato dal DeSOx sulle polveri emesse rispettivamente dai gruppi 2 e 1.*

rendimento elettrico lordo	%	34,708%	34,935%	32,923%	0,000%	36,712%	35,943%
rendimento elettrico Netto	%	29,249%	29,988%	28,587%	0,000%	29,377%	28,950%

nota 1: rendimento dello 0% è indice di gruppo fermo

nota 2: il rendimento netto negativo del gruppo 4 nel mese di novembre è dovuto ad una produzione lorda inferiore agli autoconsumi di gruppo
