- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are

deficient (DD) or in addition to population size information

- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Il sito è costituito dalla ex Valle del Mezzano finita di prosciugare alla fine degli anni '60. L'area è pressochè disabitata e attualmente caratterizzata da estesi seminativi inframezzati da una fitta rete di scoli, fossati e siepi alberate frangivento; ai suoi margini vi sono ampi canali e zone umide residue (Bacino di Bando, Vallette di Portomaggiore, Anse Vallive di Ostellato) scampate al prosciugamento. Su almeno 200 ettari sono stati ripristinati negli anni '90 stagni, prati umidi e praterie attraverso l'applicazione di misure agroambientali.

4.2 Quality and importance

Le specie nidificanti di maggior pregio (*Botaurus stellaris*, *Ardea purpurea*, *Nycticorax nycticorax*, *Platalea leucorodia*, *Circus aeruginosus*, *Acrocephalus melanopogon*) si concentrano nelle zone umide o in zone umide esterne contigue al sito. *Glareola pratincola* nidifica nelle superici a set aside, nelle praterie umide create su terreni ritirati dalla produzione applicando misure agroambientali comunitarie e nelle vaste aree coltivate a pomodoro. *Circus pygargus* nidifica nelle coltivazioni di grano e nelle praterie umide create su terreni ritirati dalla produzione applicando misure agroambientali comunitari. Importanti gli svernamenti di *Egretta alba*, *Anser spp.*, *Asio flammeus*. Inoltre da rilevare l'importanza del sito per l'alimentazione di *Gelochelidon nilotica* che nidifica nelle Valli di Comacchio con il 50% della popolazione italiana. Il sito ospita la più importante popolazione italiana di *Falco vespertinus*.
