

A 6x6 grid of squares. A path is drawn in green, starting at the top center square and moving right to the first column boundary. It then turns down to the second row boundary and continues right across the second row. From the end of the second row, it moves up to the third column boundary and continues right across the third row. Finally, it moves up to the fourth column boundary and continues right across the fourth row, ending at the bottom right corner square.
