2.0.0 GENERAL CONSIDERATIONS

The company **Lighthouse S.p.A** of Bologna – was entrusted by **Maltese Ministry for Energy and Water Management** to perform a Preliminary Marine Route Survey (PMRS) in the Sicily Strait area, located between Italy and Malta. The PMRS included geophysical, geotechnical and environmental investigations. The scope of the project was to finalise the optimal pipeline route coordinates, including route turning and landing points of a 22" gas pipeline between Italy (Gela) and Malta (Delimara) (Figure 1).

The objectives of the project were as follows:

- **Work Package 1:** execution of the Preliminary Reconnaissance Marine Survey (PMRS) on the offshore pipeline routing corridor;
- **Work Package 2:** execution of Post Survey Assessment (PSA).

This document is part of the **Post Survey Assessment**.

The results of the PSA are organized into eight (8) separate reports. This report focuses on the “Determination of Positions of UXOs and Cables”.

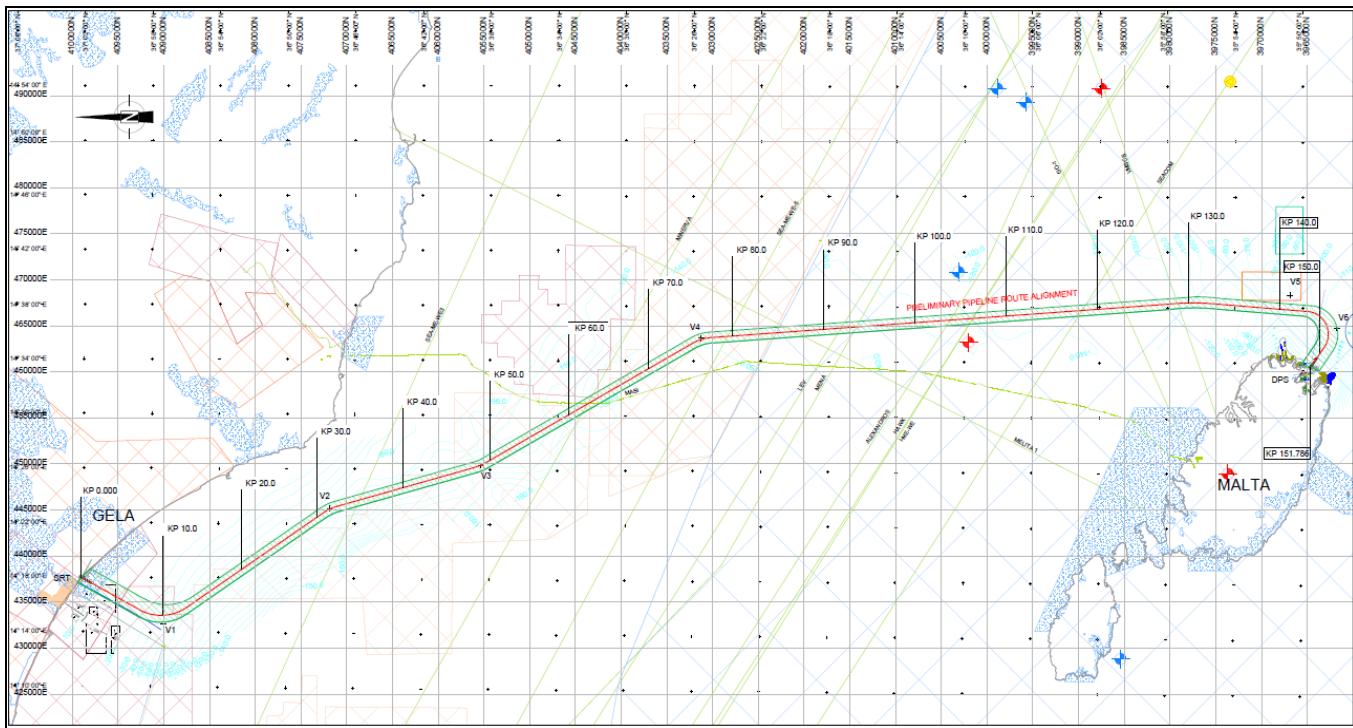

Figure 1 - Overview of reconnaissance survey route

G.Sallese	M.Bernardi	E.Lozza	13/09/2019	MEW001	PSA - UXOs, Cables	P. 6 / 63

2.1.0 Introduction

This report is aimed to identify UXOs and cables located within the survey corridor that might interfere with the pipe installation. The position and the main features of each UXO and cable are reported in order to provide all the information needed to perform a correct risk assessment and to apply the mitigation measures.

The **basic design route** was provided by the Client representative onboard R/V Odin Finder at the beginning of the marine survey, see §10.1.0 APPENDIX 1 GWF66 - PIPELINE LAYING THEORETICAL ROUTE of the report "MEW001_GEOPHY_FINAL_REPORT_REV02.doc" (hereinafter referred to as the "**route**").

All the information presented in this report, both from geophysical data and ROV data have been discussed in detail in "MEW001_GEOPHY_FINAL_REPORT_REV02.doc" report.

2.2.0 Survey Geodetic System

The work was conducted, processed and reduced using the following geodetic parameters (Table 1).

Table 1 – Geodetic data and projection parameters

GEODETIC PARAMETERS	
Datum	World Geodetic System 1984 (WGS84)
Reference Ellipsoid	World Geodetic System 1984 (WGS84)
Semi-major Axis (a)	6 378 137.000m
Semi-minor Axis (b)	6 356 752.314m
Inverse Flattening (1/f)	298.2572236
First eccentricity squared (e2)	6.69437999014x10-3
PROJECTION PARAMETERS	
Projection method	UTM 33N

3.0.0 PUBLICLY AVAILABLE INFORMATION

3.1.0 Cables

In order to identify the existing in-service (green colour) and out-of-service cables (cyan colour), the Lighthouse cable database and the database provided by the Client were used, as reported in Table 2 and Figure 2.

3.2.0 Pipelines

The existing and the planned pipelines have been sourced from the Lighthouse and the Client pipelines database. Offshore Gela the only identified pipeline is the 32" Greenstream Pipeline. It runs parallel to the basic design route, approximately 560-630m to the NW, until KP9. From KP9 the Greenstream pipeline turns SW while the basic design route turns S-SE.

No Pipeline have been identified in the Offshore section and in Malta Nearshore area.

Figure 3 shows a map of the existing and the planned pipelines within the Italy Nearshore area.

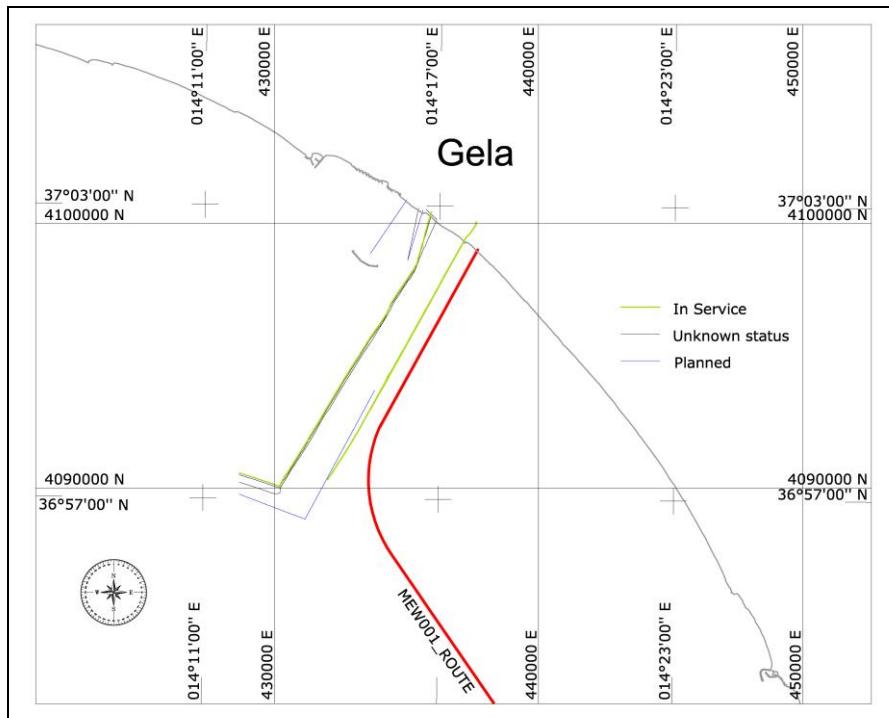

Figure 3 – Italy Nearshore: existing and planned pipelines

4.0.0 RESULTS FROM PMRS DATA STUDY

A summary of the detected SSS contacts and magnetic anomalies (from PMRS study) is shown in Table 3.

Table 3 – Detected SSS contacts and magnetic anomalies (PMRS study)

	Features	Italy Nearshore	Italy-Malta Offshore	Malta Nearshore
SSS Contacts	Pipelines/Cables	3	10	-
	Other Man-made Structures	6	214	165
Magnetic Anomalies	Pipelines/Cables	406	114	-
	Other Man-made Structures	72	427	150

Unless otherwise specified all the coordinates reported in this report and consequently all the KP and DCC measurements, are referred to the basic design route provided by the Client representative onboard R/V Odin Finder at the beginning of the marine survey.

All the DCC measurements in the following tables are positive (+) if on the right side of the pipeline and negative (-) if on the left side of the pipeline considering the increase of the KP from Gela to Malta.

4.1.0 Cables and Pipelines from Geophysical Data

Three **(3)** out of nine **(9) SSS contacts** detected within the **Italy Nearshore** area, have been interpreted as pipeline related structures, while the remaining six **(6)** are described in §4.2.0 and are not associated with cables/pipelines.

Based on their distance from the basic design route, the detected nine (9) SSS contacts can be divided as follows:

- One (1) target is located less than 20m from the route
- three (3) targets are located between 100m and 500m from the route
- five (5) targets are located more than 500m from the route

Four hundred and six **(406)** out of four hundred and seventy-eight **(478) magnetic anomalies** detected within the **Italy Nearshore** area, are related to the Greenstream and Greenstream spur line pipelines and were not charted. The remaining seventy-two **(72)** anomalies, are divided in nine **(9)** groups and nine **(9)** scattered anomalies, and described in §4.2.0.

Based on their distance from the basic design route, the detected nine **(9)** groups and nine **(9)** scattered anomalies, can be divided as follows:

- Ten (10) magnetic anomalies are located between 100m and 500m from the route
- Eight (8) magnetic anomalies are located at more than 500m from the route

Ten **(10)** out of two hundred and twenty-four **(224) SSS contacts** detected within the **Italy-Malta offshore** corridor have been interpreted as pipelines/cables related structures (Table 9), while the remaining two hundred and fourteen **(214)** are described in §4.2.0.

Based on their distance from the basic design route, the detected SSS contacts can be divided as follows:

- Eight (8) targets are located less than 20m from the route
- Eleven (11) targets are located between 20m and 50m from the route
- Twenty-nine (29) targets are located between 50m and 100m from the route
- Seventy (70) targets are located between 100m and 500m from the route
- One hundred and six (106) targets are located more than 500m from the route

One hundred and fourteen **(114)** out of five hundred and forty-six **(546) magnetic anomalies** detected within the **Italy-Malta offshore** survey corridor are related to pipelines/cables (Table 13), while the remaining four hundred and twenty-eight **(428)** are described in §4.2.0.

Based on their distance from the basic design route, the detected magnetic anomalies can be divided as follows:

- Two hundred and five (205) magnetic anomalies are located at less than 20m from the route
- One hundred and fifty-six (156) magnetic anomalies located between 20m and 50m from the route
- Twelve (12) magnetic anomalies located between 50m and 100m from the route

Issued	Checked by	Approved by	Date	IDP	File:	Rev. 01
G.Sallese	M.Bernardi	E.Lozza	13/09/2019	MEW001	PSA - UXOs, Cables	P. 12/ 63

- Eighty-five (85) magnetic anomalies located between 100m and 500m from the route
- Eighty-eight (88) magnetic anomalies located at more than 500m from the route

An example of the detected magnetic anomalies related to cable is shown in the following Figure 4.

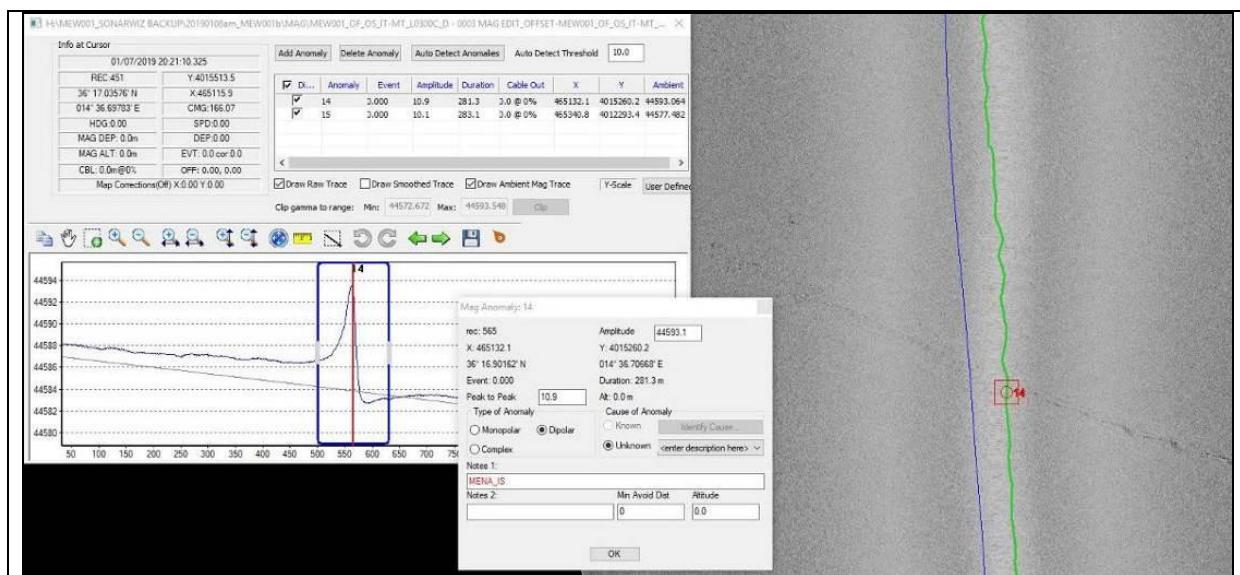

Figure 4 - Magnetometer data example: magnetic anomaly M0476 on Mena IS cable

A total of one hundred sixty-six (**166**) **SSS contacts** were detected within the **Malta Nearshore** corridor (from KP148.952 to KP150.836).

Based on their distance from the basic design route, the detected SSS contacts can be divided as follows:

- 2 targets are located at less than 20m from the route
- 2 targets are located between 20m and 50m from the route
- 4 targets are located between 50m and 100m from the route
- 39 targets are located between 100m and 500m from the route
- 110 targets are located at more than 500m from the route
- The remaining nine (9) targets are located in the north-westernmost section of the survey corridor. Their distance was not calculated as they are located to the west of the last KP on the proposed pipeline route.

A total of one hundred and fifty-one (**151**) **magnetic anomalies** were detected within the **Malta Nearshore** section of the survey corridor.

Based on their distance from the basic design route, the detected magnetic anomalies can be divided as follows:

- 4 magnetic anomalies are located at less than 20m from the route

Issued	Checked by	Approved by	Date	IDP	File:	Rev. 01
G.Sallese	M.Bernardi	E.Lozza	13/09/2019	MEW001	PSA - UXOs, Cables	P. 13 / 63

- 4 magnetic anomalies located between 20m and 50m from the route
- 7 magnetic anomalies located between 50m and 100m from the route
- 51 magnetic anomalies located between 100m and 500m from the route
- 80 magnetic anomalies located at more than 500m from the route

The remaining four (4) targets are located to the West of KP150.836, therefore their distance from the proposed pipeline route has not been measured.

4.2.0 Other Man-made Structures from Geophysical Data

Two (**2**) out of nine (**9**) **SSS contacts** detected in the **Italy Nearshore** area, have been classified as concrete blocks covered by biofouling (as result of the visual inspection survey) and the remaining four (**4**) out of nine (**9**) have been interpreted as unknown objects and are related to SBP targets and/or magnetic anomalies as detailed in Table 8. They are not associated with cables/pipelines.

Seventy-two (**72**) out of four hundred and seventy-eight (**478**) **magnetic anomalies** detected within the **Italy Nearshore** area are not associated with cables/pipelines. Five (5) anomalies, divided into two (2) main groups, are described as unknown objects associated with SSS and SBP targets. The remaining sixty-seven (67) are scattered anomalies with no association from other kind of data. Fifty-eight (58) out of the sixty-seven (67) anomalies described as unknown objects have been divided in seven (7) groups, while the remaining nine (9) are scattered within the surveyed area (Table 12).

Two hundred and nine (**209**) out of two hundred and twenty-four (**224**) **SSS contacts** detected in the **Italy-Malta offshore** corridor are not associated with cables/pipelines. Seventeen (17) targets detected by SSS have a length greater than 10m. The most remarkable ones are represented by two unknown objects (T0181 and T0206) and a big dumping area (Figure 5) with several objects. The targets list is displayed in Table 10.

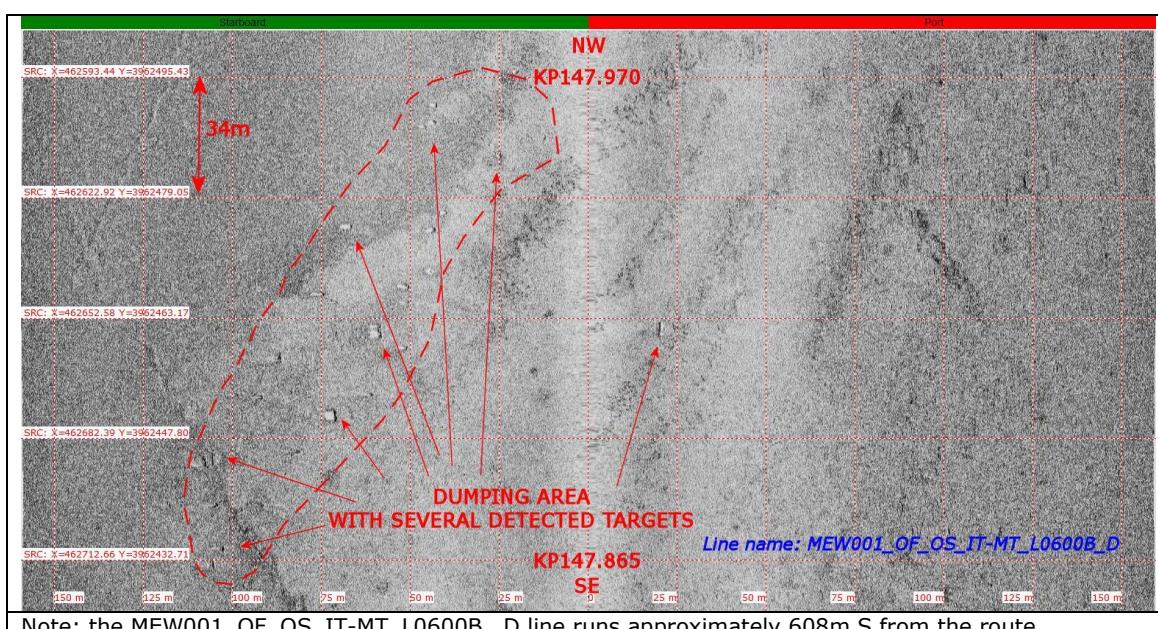

Figure 5 - SSS data example: dumping area with several detected targets

 GAS	GAS PIPELINE INTERCONNECTION MALTA-ITALY POST SURVEY ASSESSMENT DETERMINATION OF POSITIONS OF UXOS AND CABLES						 <small>MINISTERU GHALL-ENERGIJA U L-IMMANIGGJAR TAL-ILMA</small>
Issued G.Sallese	Checked by M.Bernardi	Approved by E.Lozza	Date 13/09/2019	IDP MEW001	File: PSA - UXOs, Cables	Rev. 01 P. 14/ 63	

Excluding all the anomalies generated by pipelines/cables a total of four hundred and twenty-eight (**428**) **magnetic anomalies** were detected within the **Italy-Malta offshore** corridor (Table 14).

A total of one hundred sixty-six (**166**) **SSS contacts** were detected within the **Malta Nearshore** corridor and they are not related to cables/pipelines. The list of all the objects detected is displayed in Table 11.

A total of one hundred and fifty (**150**) **magnetic anomalies** were detected within the **Malta Nearshore** section of the survey corridor (Table 15) and were not related to cables/pipelines. Ninety-five (95) of them have an "Unknown origin", while thirty-four (34) magnetic anomalies correspond to target detected also with Side Scan Sonar. Most of the remaining are referred to mooring blocks with ropes or to anchors and anchor chains.

4.3.0 Man-made Features from ROV Survey

Following the geophysical survey results, an ROV visual inspection campaign aimed to better investigate the findings (both natural and anthropogenic) was planned.

Based on the interpretation of MBES, SSS, SBP and Magnetometer data collected during the geophysical phase of the PMRS, a total of forty-nine (49) lines were planned for a visual investigation. The ROV visual survey allowed the identification of one hundred and nineteen (119) targets: for details see Table 16.

Unless otherwise specified all the coordinates reported in Table 16 and consequently all the KP and DCC measurements, are referred to the ROV position during the visual identification of each object. Reference route is the basic design route provided by the Client representative onboard R/V Odin Finder at the beginning of the marine survey.

5.0.0 UXO SURVEY RESULTS

5.1.0 UXO DETECTED DURING PMRS GEOPHYSICAL SURVEY

During the geophysical and UXO surveys a total of three **(3) SSS contacts** and nine **(9) ROV contacts** were detected within the **Italy-Malta Offshore** corridor. They were interpreted as:

- two squid bombs (MEW001_V023 and MEW001_V027)
- four naval mines (MEW001_V119, MEW001_T374, MEW001_T463, MEW001_T490)
- six barrels/possible depth charges (MEW001_V003, MEW001_V053, MEW001_V054, MEW001_V058, MEW001_V060, MEW001_V061).

Based on their distance from the basic design route, the detected UXO targets can be divided as follows:

- 1 target is located at less than 20m from the route
- 5 targets are located between 100m and 500m from the route
- 6 targets are located at more than 500m from the route

Unless otherwise specified all the KP and DCC measurements, are referred to the basic design route provided by the Client representative onboard R/V Odin Finder at the beginning of the marine survey (Table 4 and Table 5).

5.2.0 GELA UXO SURVEY RESULTS

The Gela UXO survey results are presented in “Valutazione del Rischio Bellico” in Appendix 6.9.0.

The document is in Italian language, and the results are summarized below.

The tools used in order to evaluate and define the residual war hazard in the studied area are:

- Preliminary historical study
- Documentary Analysis
- Geophysical Survey

5.2.1 Preliminary Historical Study

The historiographical analysis of the site confirms a documented war activity carried out in the territory surrounding the areas affected by this project, mainly attributable to ground activity (direction of Anglo-American advance during World War 2 - risk: potential discovery of small /

LIGHTHOUSE GAS	GAS PIPELINE INTERCONNECTION MALTA-ITALY POST SURVEY ASSESSMENT DETERMINATION OF POSITIONS OF UXOS AND CABLES					 MINISTERU GHALL-ENERGIJA U L-IMMANIGGJAR TAL-ILMA
Issued G.Sallese	Checked by M.Bernardi	Approved by E.Lozza	Date 13/09/2019	IDP MEW001	File: PSA - UXOs, Cables	Rev. 01 P. 17 / 63

medium caliber artillery shells) and Anglo-American air raids (Allied planes bombing - risk: unexploded potential bomb discovery - mass type: aviation bomb of average variable weight, mainly 500 or 1000 lbs).

5.2.2 Documentary Analysis

The documentary analysis of the area presents a project intervention that foresees the execution of geotechnical and environmental investigations preparatory to the laying of a Gas pipeline.

5.2.3 Geophysical Survey

Indirect instrumental analysis has covered the three borehole locations, for a total area of about 23.52 square meters, and allowed to map the magnetic field anomalies in the area.

During the geophysical survey and subsequent data processing, it was NOT found any anomaly of the magnetic field detected in the seabed related to structures, materials or any identifiable anthropic interventions, that can be classified as non-comparable to medium-sized bombs or large dimensions. All 3 Points were subject to monitoring at the maximum depths of penetration estimated for bombs of this size.

5.2.4 Conclusion

The outcome of geophysical field monitoring is documented for the entire area analyzed, the absence of singular or heterogeneous, magnetic anomalies associated to potential war risk. This allowed to assess the residual war risk assessment attributable to the project site, provided by the Security Coordinator at the time of survey, towards a level of general acceptability.

Issued G.Sallese	Checked by M.Bernardi	Approved by E.Lozza	Date 13/09/2019	IDP MEW001	File: PSA - UXOs, Cables		Rev. 01 P. 18/ 63	

6.0.0 APPENDICES

6.1.0 Cable Crossings List

A total of twenty (20) cable crossings have been detected along the whole basic design route. Ten (10) were detected by means of Side scan sonar and magnetometer, while the other ten (10) were detected only by means of magnetometer data. The cable crossings list is shown in Table 6.

Table 6 – Cable crossings list (PMRS study)

6.2.0 Side Scan Sonar Contacts List (Italy Nearshore area)

In the following tables have been reported the ID of the sonar contacts with relative coordinates, dimensions, KP and description. In particular the DCC measurements for the right side (+) are referred to the west side of the basic design route; otherwise the DCC measurements for the left side (-) are referred to the eastern side of the basic design route.
