Other Site Characteristics

Residuo settentrionale, di maggiori dimensioni, dell'antica pineta di Ravenna. Ricco di bassure umide alternate a "staggi" derivati dagli antichi cordoni dunosi. Il bosco planiziale su cui è stato imposto Pinus pinea appare perciò alternatamente igrofilo, mesogilo, xerofilo. La pineta è attraversata da nord a sud dalla Bassa del Pirotolo, depressione di acqua da dolce a salmastra, ed è attraversata in senso est-ovest da numerosi canali e dal fiume Lamone.

4.2 Quality and importance

Specie vegetali RARISSIME e MINACCIATE: *Hottonia palustris*, *Centaurea spinoso-ciliata* subsp. *tommasinii*. RARE: *Helianthemum jonium*. Allo stato attuale la pineta non presenta, causa gli elevati fattori di disturbo (caccia, pressione antropica), alcun interesse faunistico, se si eccettuano le presenze legate alla Bassa del Pirotolo (garzaia di *Egretta garzetta* e nidificazione di *Himantopus himantopus*). Con ogni probabilità le colonie di Chiroptera sono estinte. Rappresenta comunque un habitat unico dalle grandi potenzialità, se correttamente gestito.
